Collaboration

Kanjobugyo Cloud

Accounting

One-stop from cost adjustment workflows to accounting systems

It used to require a workflow that includes outputting categorized data created with J' sNAVI NEO with CSV and manually importing them to the accounting system. The collaboration of J' sNAVI NEO and Kanjobygyo allows users to issue categorized slips easily because the categorized data created with J' sNAVI NEO are automatically imported to Kanjobugyo Cloud. This eliminates the time required for data output and manual input, which eventually reduces the workload of the accounting section. It also realizes more smoother accounting processing. It can also reduce the risks of data falsification drastically because the data are directly shared between the systems. Not only general costs adjustment but also adjustment of costs of travel arranged by the company can be automatically collaborated with the API. J' sNAVI NEO will contribute to accelerate accounting DX and increase the productivity of cost adjustment operations by broadening the services applicable to API collaboration.

Overview of J' sNAVI NEO -

J' sNAVI NEO is a business trip and cost adjustment management cloud service, which integrates an online business trip arrangement system and business trip and cost adjustment workflows. With this solution, not only the daily travel costs and entertainment costs adjustments but also applications, arrangements, cost adjustments, and payments for domestic and overseas business trips can be implemented. Those operational workloads will be reduced and become more efficient by unifying dispersed operations that include cost adjustments and business trip related operations.

Features of J' sNAVI NEO

-Applicable to the requirements of the revised Electronic Books Maintenance Act (JIIMA certified)

-The system allows users to import receipts using AI/OCR.

-Realizes digitalization of cost adjustments without changing the existing business trip and costs rules because the system allows various kinds of checking and the establishment of detailed rules.

-Implements the smartphone application that allows the import of corporate cards and IC cards of transportation companies, linkage with fare search software, and mobile authorization.

-Linkage with accounting systems using CSV and API

-Implements JTB's online ticket reservation system, which realizes cashless and paperless reservations of business trips with lump-sum invoices from JTB.

About Kanjobugyo Cloud

Kanjobugyo Cloud, the financial accounting system, improve the productivity of accounting operations with innovative technologies. Issuing slips can be automated by learning about receipts and with the linkage to the account statement data of financial institutions. With these functions, transaction entries are completed with only a few clicks. Equipped with the functions to process management accounting with the company's added unique point of view, along with accounting documents that include ledgers and balance sheets, the cloud system identifies the real-time business status daily and supports prompt business decision makings utilizing the real-time processing functions. It comes with a complimentary specialist's license that can be provided to a specialist, such as an advisory tax accountant. Because the accounting data can be shared on a real-time basis, back-up data or the transfer of categorized data is unnecessary, which contributes to drastically speeding up the monthly processing.
