JTB Business Travel Solutions, Inc.

JTB Group's Expense Data Transfer Platform "Bizvance JTB Data connect" Starts Integration with Systems Research & Development Institute of Japan's "Travel Expense System WEB Version"

- Achieving efficient business travel-related operations through expense settlement processes without manual input or receipt attachments -

JTB Business Travel Solutions, Inc. (headquartered in Koto-ku, Tokyo; President & CEO: Masahiro Harada; hereinafter referred to as "JTB-CWT"), which provides the JTB Group's expense data transfer platform "Bizvance JTB Dataconnect," has commenced data integration with the "Travel Expense System WEB Version" provided by Systems Research & Development Institute of Japan (headquartered in Shinjuku-ku, Tokyo; Representative Director: Fumiaki Sakurauchi; hereinafter referred to as "SRDI").

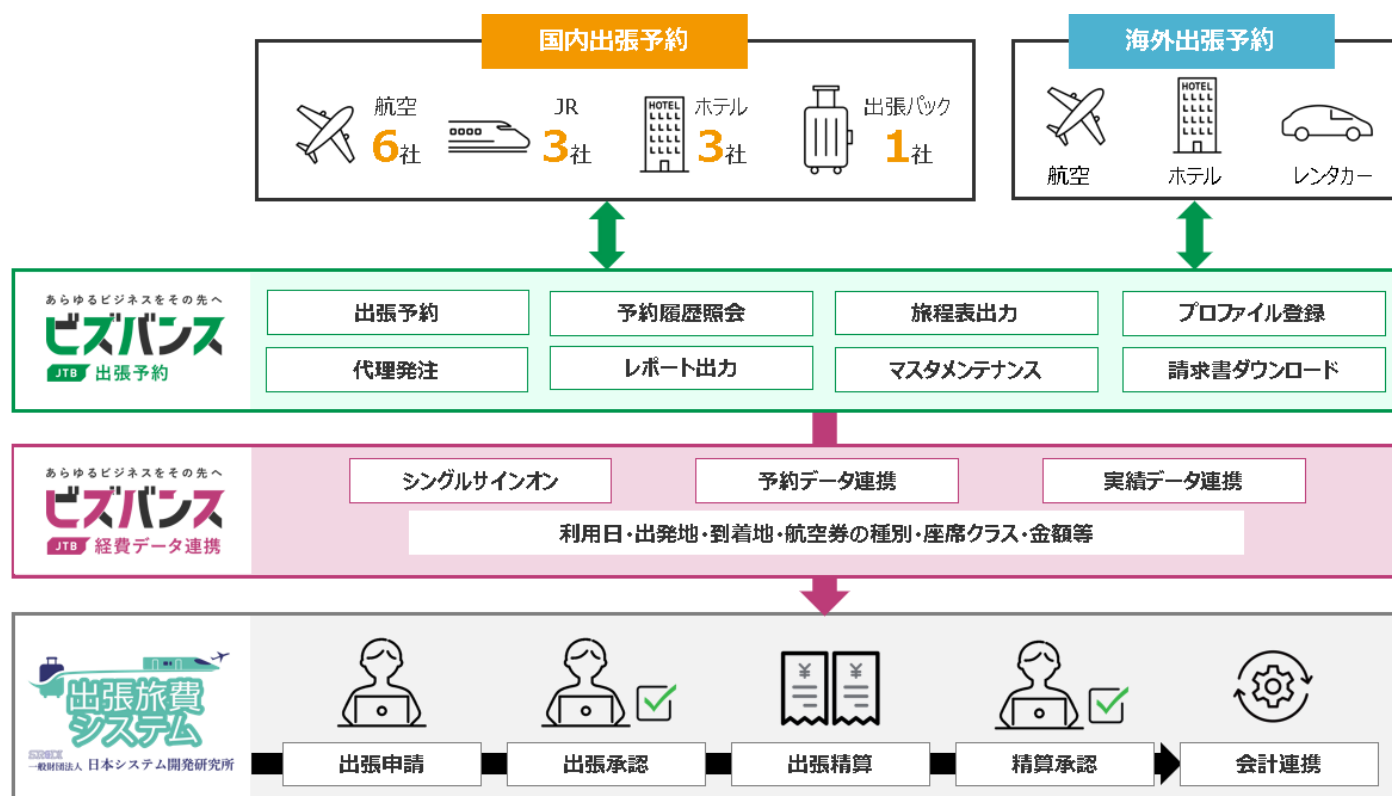

■Background and Purpose of the Integration

JTB-CWT has been providing Business Travel Management (BTM) services to general corporations, as well as public sector organizations, national and public universities, and independent administrative agencies. "Bizvance JTB Dataconnect" is an expense data transfer platform that can integrate all types of expense data, including business travel data, with external expense settlement services. This time, JTB-CWT jointly developed an API integration between "Bizvance JTB Dataconnect" and SRDI's "Travel Expense System WEB Version" with the aim of further enhancing the convenience of expense settlement operations.

■Benefits of the Integration

Through the API integration function of "Bizvance JTB Dataconnect," business travel performance data from "Bizvance JTB Booking" is automatically reflected in the "Travel Expense System WEB Version," eliminating the need for manual input in traditional business travel expense settlement. Batch invoices issued by "Bizvance JTB

"Booking" are compliant with invoice system requirements, eliminating the need to attach receipts or invoices, thereby enabling more efficient business travel expense settlement.

"Bizvance JTB Dataconnect" aims for automatic integration of all expense data, eliminating time-consuming tasks such as manual input and receipt attachments, and making customers' expense settlement systems easier and simpler to use. JTB-CWT and SRDI, as collaborative partners, will co-create solutions to provide more advanced business travel booking services for public institutions, national and public universities, and independent administrative agencies, and to realize more efficient business travel-related operations.

■About "Bizvance JTB Dataconnect"

"Bizvance JTB Dataconnect" is a cloud-based expense data transfer platform that relays business travel data and card usage detail data necessary for expense settlement. As of May 2025, it has been implemented by over 300 companies. Its implementation contributes to the improvement of overall operational efficiency in expense processing, including fraud prevention and cost reduction through the visualization of business travel and various other expenses. "Bizvance JTB Dataconnect" aims to eliminate all manual input and the attachment of receipts and invoices. It has a track record of integration with many expense settlement and workflow systems sold in Japan.

■About "Bizvance JTB Booking"

"Bizvance JTB Booking" is a system that realizes batch arrangement and management of business travel and streamlines and simplifies business travel-related operations. It offers online booking for international and domestic flights/hotels for business travelers, as well as profile management functions, report extraction for administrators, and various settings and maintenance functions. In addition to booking JR tickets, flights, and tours for domestic

business travel, it centralizes flight and hotel bookings for international business travel, contributing to operational efficiency and cost reduction.

■About "Travel Expense System WEB Version"

The "Travel Expense System WEB Version" complies with the travel expense regulations for national public servants and police travel expense handling regulations. It also accommodates revisions to travel expense systems, and is used as a system that incorporates the necessary functions for processing travel expenses as standard. This integration is expected to further enhance the convenience of business travel booking and the productivity of settlement operations. This system comprehensively supports all business travel operations from the PCs of the travelers themselves or the travel expense personnel in the requesting department. Specifically, it streamlines a series of operations from creating travel plans, confirming execution status, creating orders/invoices/reports, approval processing, ticket arrangements, map integration, and linkage with financial accounting systems. It streamlines the entire process from creating travel plans to calculating travel expenses and preparing orders/invoices, and allows for PDF output. Even after system implementation, various optional functions can be added to accommodate changes in the client's organization. It also responds quickly to revisions in travel expense systems, and enables approvers and travel expense personnel to confirm details online through the evidence upload function. It also supports actual expense reimbursement with a lodging cost limit, enabling flexible operation.
