JTB Business Travel Solutions, Inc.

JTB Group's Expense Data Integration Platform "Bizvance JTB Dataconnect" Begins Collaboration with ZERONI's "taias I/F"

– Making expense data integration more accessible and easier –

JTB Business Travel Solutions, Inc. (headquartered in Koto-ku, Tokyo; President & CEO: Masahiro Harada; hereinafter referred to as "JTB-CWT"), which provides the JTB Group's expense data integration platform "Bizvance JTB Dataconnect (JTB Group's expense data integration platform)," has commenced system-to-system data integration with "taias I/F (an interface for system-to-system data integration)" provided by ZERONI Corporation (headquartered in Chiyoda-ku, Tokyo; President & CEO: Tomohiro Nishiura; hereinafter referred to as "ZERONI").

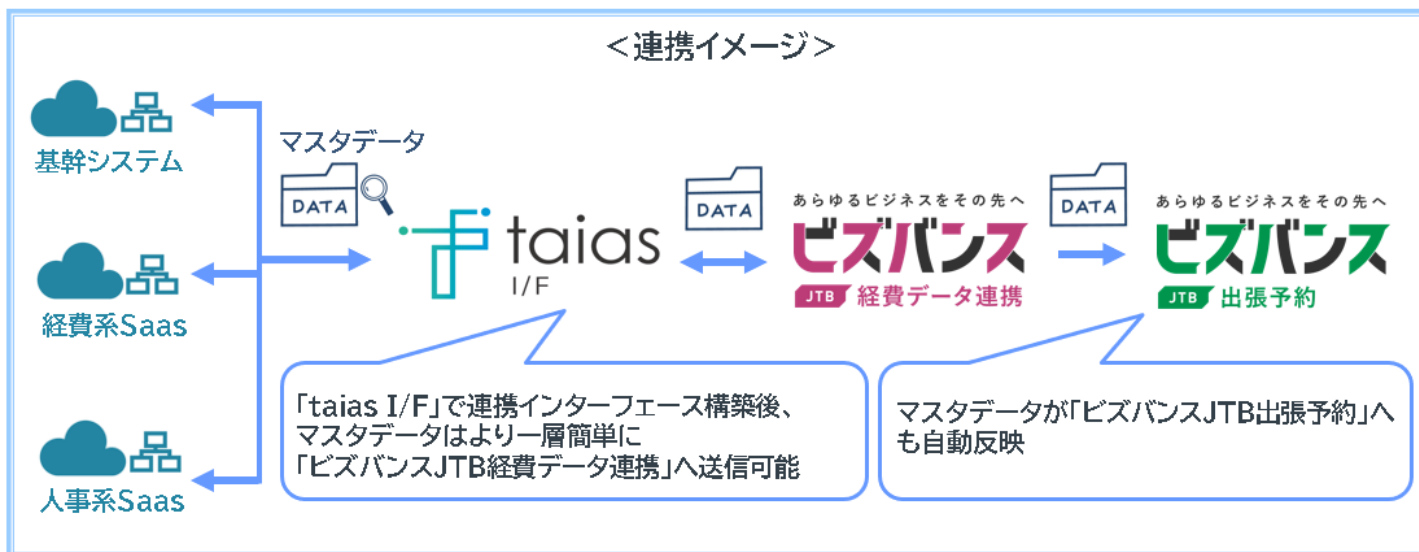

JTB-CWT has extensive experience and high expertise in the business travel management domain, providing comprehensive solutions that contribute to resolving customer issues related to corporate activities and advancing business. "Bizvance JTB Dataconnect" is an expense data integration platform that can link expense data, such as business travel data and corporate card usage data, to external systems.

ZERONI provides "taias I/F," a platform that enables low-cost definition and construction of interfaces (system-to-system data integration). On the "taias I/F" platform, users can build desired interfaces in-house by simply executing tasks provided as "quests" by an assistant. This eliminates additional costs for specification changes or additions, and allows for the construction of high-quality interfaces of the same granularity without relying on specialized system developers.

JTB-CWT will now promote low-cost and efficient data integration by leveraging ZERONI's "Express Template" within "taias I/F" to facilitate the integration of "Bizvance JTB Dataconnect" APIs with various corporate systems.

As the first phase, we will begin offering dedicated templates that enable no-code automatic integration of master data, such as employee and department information, for over 1,500 corporate clients currently using JTB-CWT's online booking tool, "Bizvance JTB Booking (JTB Group's online booking tool)."

Benefits of Integration

1. Significant Reduction in Development Effort

- **Integration with data sources:** Eliminates the need for conventional individual development, enabling unified data acquisition via taias I/F.
- **Integration with data destinations:** Utilizes Express Templates to efficiently build integrations with minimal effort.

2. Reduction in Operation and Maintenance Costs

- Changes in specifications can be handled solely by configuration modifications.
- Shortens development lead time, enabling rapid service provision.
- Optimizes human resources involved in system maintenance.

3. High Flexibility and Scalability

- Supports various data formats (CSV, XML, fixed-length).
- Addition or modification of API items can be handled solely by configuration changes.
- Enables rapid response to the addition of new data sources.

4. Improved Quality and Risk Mitigation

- Ensures consistent quality through standardized templates.
- Reduces bug risks associated with individual development.
- Provides a stable data integration environment.

Moving forward, both companies will continue to develop functions and services that make expense data

integration more accessible and easier, responding to customer requests such as "I wish this data could be automatically integrated." We aim to provide better data integration services that improve the efficiency of corporate expense processing and reduce costs.

About "Bizvance JTB Dataconnect"

"Bizvance JTB Dataconnect" is a cloud-based expense data integration platform that relays business travel data and corporate card usage data required for expense settlement. As of August 2025, it has been implemented by over 300 companies. Its implementation contributes to improving overall operational efficiency in expense processing by visualizing business travel and other usage expenses, preventing fraud, and reducing costs. "Bizvance JTB Dataconnect" aims to eliminate all manual input tasks and the need for receipts and invoices. It has a proven track record of integration with many workflow and expense settlement systems sold in Japan.

About "Bizvance JTB Booking"

"Bizvance JTB Booking" is a system that enables centralized arrangement and management of business travel, streamlining and simplifying business travel-related operations. It offers functions for business travelers to make online bookings for international and domestic flights/hotels, as well as profile management. For administrators, it includes report extraction, various settings, and maintenance functions. It contributes to operational efficiency and cost reduction for international and domestic business travel, including JR, flights, and tours.

About "taias I/F (Tias Interface)"

"taias I/F" is a platform that enables low-cost definition and construction of interfaces (system-to-system data integration) that previously had to rely on system integrators (Sler). In conventional interface construction, Slers create specification documents, and programs are developed and verified based on these documents. Costs increase with the number and complexity of interfaces, and modifications are required whenever linked systems are updated, placing a significant burden on businesses due to the enormous development, operation, and maintenance costs. "taias I/F" supports Slers in the tasks involved in interface construction. On the platform, users can build desired interfaces in-house by simply executing tasks provided as "quests" by an assistant. Unlike conventional interface construction projects, it is possible to execute source code generation within the platform multiple times, allowing for specification changes without worrying about additional costs for specification additions or modifications until the desired interface is created. High-quality interface construction at the same granularity as that created with an Sler can be completed solely on this platform, without going through an Sler.

About "Express Template"

"Express Template," embedded in "taias I/F," is a function that automatically creates projects with pre-set data lists and data item mappings for system integration by simply selecting the target from a list of available templates. By

modifying the mapping to suit each company's operations based on the created project, the necessary interface can be built in as little as one day. Additionally, items not covered by templates can be defined using the "Smart Connect" function.

About JTB Business Travel Solutions, Inc.

Name: JTB Business Travel Solutions, Inc.

Location: NBF Toyosu Canal Front, 5-6-52 Toyosu, Koto-ku, Tokyo

Representative: President & CEO: Masahiro Harada
