JTB Business Travel Solutions, Inc.

Expense Data Integration Platform "Bizvance JTB Dataconnect" Begins Collaboration with "Harmos Expense"

– Seamlessly Completing Everything from Business Travel Booking to
Expense Settlement –

JTB Business Travel Solutions, Inc. (headquartered in Koto-ku, Tokyo; President & CEO: Masahiro Harada; hereinafter referred to as "JTB-CWT"), which provides business travel management and business travel booking/expense settlement solutions for the JTB Group, has commenced offering integration functionality between its expense data integration platform, "Bizvance JTB Dataconnect", and the expense settlement system "Harmos Expense," provided by BizReach, Inc. (headquartered in Shibuya-ku, Tokyo; President: Tetsuya Sakai).

Through this integration, business travel booking data from "Bizvance JTB Booking" will be automatically imported into "Harmos Expense" via "Bizvance JTB Dataconnect" This significantly reduces the input burden on business travelers, prevents settlement errors, and alleviates the burden of verification for approvers and the accounting department.

Furthermore, the consolidated invoices issued by "Bizvance JTB Booking" are compliant with Japan's invoice system, eliminating the need to attach receipts or invoices. This further streamlines expense processing, enhances corporate productivity, and strengthens governance.

Image of Business Process Improvement: Smoother Business Travel Arrangement to Settlement

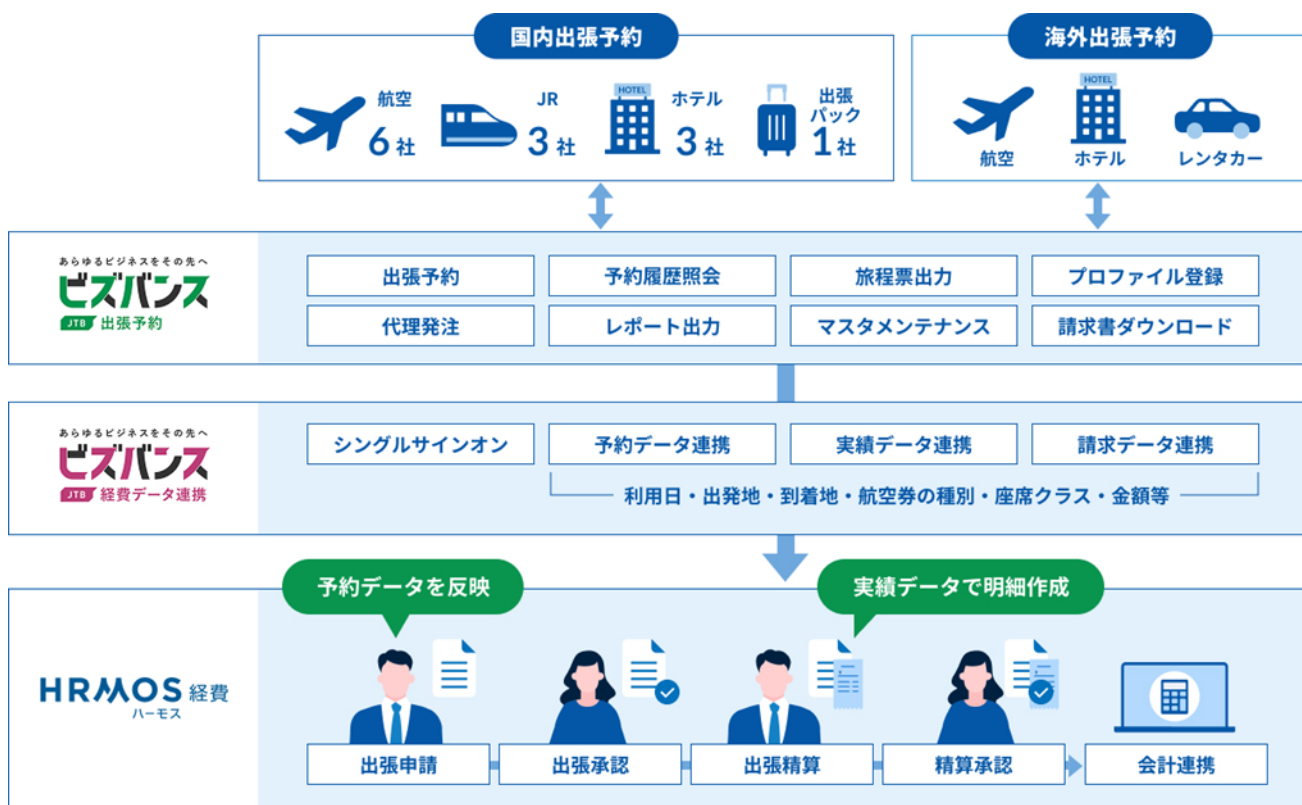

For companies with multiple business trips per month, the following business improvements can be expected:

- By enabling consolidated arrangements for flights and hotels simultaneously with business travel applications, the booking burden on business travelers is reduced. Additionally, company-wide consolidated billing

eliminates the need for employees to make advance payments. Moreover, booking through a centralized site improves convenience for business travelers, and approvers can easily determine whether bookings are appropriate and compliant with regulations.

- Information such as travel dates, destinations, transportation methods, and amounts registered during business travel booking will be automatically reflected in the business travel application form of "Harmos Expense." This streamlines the verification process of booking details and application content for both applicants and approvers, and prevents application errors.
- After a business trip, by simply selecting the integrated actual performance data on the "Harmos Expense" business travel settlement screen, the details are automatically imported into the expense statement. This not only reduces manual input but also eliminates the need to attach individual receipts or invoices, allowing applicants to complete their applications by simply confirming the content. Approvers and accounting staff can efficiently reconcile and verify business travel details and expenses, reducing rework and verification efforts.

It becomes possible to seamlessly complete everything from business travel booking to expense settlement.

Background of the Integration

In corporate business travel operations, business travel booking, performance management, and expense settlement are often managed by separate systems or processes. A significant challenge has been the substantial time and effort required for manual input and content verification during expense settlement.

To address these challenges, this integration has been released with the aim of "creating a state where business

travel booking information can be directly utilized as the starting point for expense settlement."

"Bizvance JTB Dataconnect" will continue to strive for automatic integration of all expense data, eliminating cumbersome tasks such as manual input and attaching receipts, with the theme of making customers' expense settlement operations easier and simpler.

About "Bizvance JTB Dataconnect"

"Bizvance JTB Dataconnect" is a cloud-based expense data integration platform provided by JTB-CWT. It relays various expense data, such as business travel booking data and card usage statements, and can integrate with expense settlement systems. It has a proven track record of integration with many expense settlement systems and workflow systems sold in Japan, supporting the efficiency of corporate back-office operations.
